Montreal, Canada | +1 (514) 641-0366 | vishnucanada@gmail.com | linkedin.com/in/vishnu-garigipati-28aa562b5 | github.com/vishnucanada | vishnucanada.github.io/personal-website

SUMMARY

Computer Science graduate with 1+ year of software engineering experience across Ericsson, ETS, and an early-stage startup, building full-stack applications, telemetry and large-scale data pipelines, and ML systems. Strong in Python, Java, C#, and JavaScript with CI/CD and cloud (Google Cloud, AWS, Azure) experience. Two IEEE papers under review. Bilingual: fluent English and French.

EDUCATION

Concordia University, Montreal, Canada

Jan 2021 – Dec 2025

Bachelor of Computer Science | Coursework: Data Structures and Algorithms, Software Engineering, Artificial Intelligence

EXPERIENCE

Software Engineer, Contract

Jun 2026 – Present

Latent Technologies – Montreal, Canada

- Training prediction models over protocol latency telemetry in Python, with containerized (Docker) scripts for data collection, processing, and evaluation
- Automating pipelines that ingest and analyze large volumes of latency metrics across protocols to detect performance regressions

AI Research Intern

Jul 2025 – Dec 2025

École de Technologie Supérieure – Montreal, Canada

- Engineered end-to-end research infrastructure in PyTorch and TensorFlow: data generation, model training, an evaluation harness, and automated benchmarking over large-scale simulated datasets
- Architected a modular, reproducible framework with clean separation of concerns, applying software-design principles to a research codebase; delivered to open-source release

Software Developer Intern

Jan 2024 – Sep 2024

Ericsson – Montreal, Canada

- Shipped full-stack backend services for autonomous-vehicle communication over private 5G networks; cut end-to-end latency by 60% through distributed system design
- Modeled network behavior from limited telemetry using maximum-entropy methods; co-authored a patent application and research paper
- Containerized services with Docker and Kubernetes and automated delivery via GitLab CI/CD on AWS and Azure; designed an intent-decomposition system (Python, Prolog, Camunda)

PROJECTS

NoteHelper: Full-Stack AI Study Assistant on Google Cloud

[\[Live Demo\]](#)

- Built a full-stack web application end-to-end — Python (Flask) back-end with a JavaScript / HTML / CSS front-end — integrating Google Cloud's Gemini API via the google-genai SDK for document-grounded Q&A
- Implemented REST endpoints with session state, CORS, and structured-JSON parsing; adapted quickly to a new GenAI stack to ship reliable retrieval-augmented responses from user-provided material

HCS: Hyperdimensional Computing for Semantic Communication, UAVs

[\[GitHub\]](#)

- Owned the full software lifecycle of a neuro-symbolic edge system; engineered a raw-sensor-to-symbolic data pipeline achieving 75% bandwidth reduction on constrained hardware

Efficient Neural Constellation Learning via Cross-Architecture Distillation

[\[GitHub\]](#)

- Designed an end-to-end pipeline (data generation → training → evaluation) with an automated benchmarking framework testing

SKILLS

- **Languages:** Python, Java, C, C#, JavaScript, SQL
- **Full-Stack / Infra:** Flask, REST APIs, HTML/CSS, Docker, Kubernetes, GitLab CI/CD, Google Cloud, AWS, Azure, Git / GitHub
- **Data:** Telemetry pipelines, large-scale data systems, ETL, PyTorch, TensorFlow, Pandas, NumPy
